

Listing of Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A laminate structure comprising:

an inner substrate that ruptures upon the application of a certain tensile force in a longitudinal direction;

extensible first and second outer substrates, wherein said inner substrate is positioned between and bonded to said first and said second outer substrates to define at least one pocket having an upper pocket region and a lower pocket region, wherein said tensile force does not cause said first and said second substrates to substantially rupture;

a first reactant contained within said upper pocket region; and

a second reactant contained within said lower pocket region, wherein said first reactant and said second reactant are capable of intermixing when said inner substrate is ruptured, said intermixing causing said reactants to undergo an endothermic or exothermic reaction.

2. (Cancelled)

3. (Original) A laminate structure as defined in claim 1, wherein said first and said second outer substrates are selected from the group consisting of nonwoven webs, films, woven fabrics, knitted fabrics and combinations thereof.

4. ^{original}~~(Withdrawn)~~ A laminate structure as defined in claim 1, wherein at least one of said outer substrates contains a film.

original
5. ~~(Withdrawn)~~ A laminate structure as defined in claim 1, wherein at least one of
said outer substrates contains a nonwoven web.

6. (Original) A laminate structure as defined in claim 1, wherein at least one of
said extensible outer substrates contains an elastomeric material.

7. (Original) A laminate structure as defined in claim 1, wherein at least one of
said extensible outer substrates has a length greater than the length of said inner
substrate.

8. (Original) A laminate structure as defined in claim 7, wherein at least one of
said extensible outer substrates is folded.

9. (Original) A laminate structure as defined in claim 1, wherein said outer
substrates are capable of extending at least about 30% in said longitudinal direction.

10. (Original) A laminate structure as defined in claim 1, wherein said outer
substrates are capable of extending at least about 50% in said longitudinal direction.

11. (Original) A laminate structure as defined in claim 1, wherein said outer
substrates are capable of extending at least about 75% in said longitudinal direction.

12. (Original) A laminate structure as defined in claim 1, wherein said inner
substrate is selected from the group consisting of nonwoven webs, films, woven fabrics,
knitted fabrics and combinations thereof.

original
13. ~~(Withdrawn)~~ A laminate structure as defined in claim 1, wherein said inner
substrate contains a film.

original
14. ~~(Withdrawn)~~ A laminate structure as defined in claim 13, wherein said film is
prestretched and contains a filler.

rupturing, wherein said inner substrate is positioned between and bonded to said first and said second outer substrates to define multiple pockets aligned in series, wherein each of said pockets has an upper pocket region and a lower pocket region;

a first reactant contained within said upper pocket region of at least a portion of said pockets; and

a second reactant contained within said lower pocket region of said pockets that also contain said first reactant, wherein said first reactant and said second reactant are capable of intermixing when said inner substrate is ruptured, said intermixing causing said reactants to undergo an endothermic or exothermic reaction.

23. ^{original} ~~(Withdrawn)~~ A wrap as defined in claim 22, wherein said outer substrates contain a film, a nonwoven web, or combinations thereof.

24. (Original) A wrap as defined in claim 22, wherein at least one of said outer substrates contains an elastomeric material.

25. (Original) A wrap as defined in claim 22, wherein at least one of said outer substrates is folded.

26. (Original) A wrap as defined in claim 22, wherein said outer substrates are capable of extending at least about 50% in said longitudinal direction upon application of said tensile force.

27. (Original) A wrap as defined in claim 22, wherein said outer substrates are capable of extending at least about 75% in said longitudinal direction upon application of said tensile force.

28. (Original) A wrap as defined in claim 22, wherein said inner substrate contains a film.
